

TO GET PHOTOMETRY FOR THIS LED SOLUTION YOU MUST SPECIFY A MINI PROFILE.

We do not supply LED sources without an extruded aluminium heatsink and diffuser. These aluminium extrusions take heat away from the LED Chip and protect it from damage. This in turn increases the lifetime of the lighting solution and improves the visual light effect.

*For this reason we do not supply photometric files for LED sources on their own. In order to get accurate photometry for your lighting solution you should **specify a Mini Profile.***

We offer a wide range of linear profiles in which you can utilise your chosen LED source. You will find some standard variations of photometry on the chosen Mini Profiles web page, and can request photometry for each Mini Profile if the LED source you want is not shown.

If you need further guidance, do not hesitate to call our head office on 01235 553769. We are happy to help.
